

Consentium — 2018 Year in Review

Jan 9

What a year 2018 has been for Consentium— from its conception to where it is today! Let's recap and celebrate what has been done and what is to come.

Before 2018, there were already a few C2C cryptocurrency wallets in the market. But the idea a crypto wallet integrated within a chat app that rewards you for building and engaging a community? Well, that's a first! And that was how Consentium was conceived.

In January last year, we developed a [chat community monetisation model \(CCM\)](#) that doubled up as a multi-cryptocurrency wallet. With this dream, we did our first round of private sale and raised USD\$10 million while growing a community of 15,000 people on Telegram.

In February, we launched our [airdrop campaign](#) giving away a total of 40,000 CSM Tokens.

In March alone, we raised another [USD\\$5 million in our private sale](#), reaching a total of USD\$15M in token sales. Early followers got a sneak peak of the Consentium app and we launched a Beta version for Android users. Our team also partnered up with [ThothTrust](#) to further enhance the security of our in-app wallet.

During April, we hit our [pre-sale cap of USD\\$20 million](#) within the first hour and reached a [4.4 rating on ICOBench](#). For our

[public sale](#), we successfully reached our hard cap and [closed our token sales at USD\\$42 million!](#)

In [May](#), we distributed our tokens and had it [listed with Megaxstore](#). Our token holders were able to use the tokens to purchase tangible items off the webstore, rewarding them for their investment. Our roadmap for the rest of the year was released in the month of [June](#).

Our second half of the year was as exciting– Consentium was [launched on the Google Playstore](#) in September, followed by the Apple Store in October. This was then followed by a series of exchange listings we managed to secure before the year closed.

Consentium app launches on **iOS** and **Google Playstore**

A [launch party](#) was held in [October](#) for Consentium's [new listing](#) on [LAToken](#).

After a month of hustling, we got listed on [Bitforex](#) (Top 15 Cryptocurrency Exchange) and [DigiFinex](#) (Top 10 Cryptocurrency Exchange) in December! Just in time for our [Ecosystem launch](#), whereby we introduced our new exchange platform– Exonium!

We closed 2018 with one final event– in partnership with Huobi we presented [JAB Fest](#) the first art and jazz event done in the blockchain sphere in Huobi’s new Singapore office.

What a year of activities and achievements! To date we have received 44,000 downloads for the Consentium app. Here's to an even better 2019!
